<u>B) Reading Comprehension (16 Marks)</u> <u>Read the following passage, then answer the questions that follow:</u>

Any time an astronaut gets out of a vehicle while in space, it is called a spacewalk. A spacewalk is also called an EVA. EVA stands for extravehicular activity. The first person to go on a spacewalk was Alexei Leonov. He was from Russia. The first spacewalk was on March 18, 1965. It was 10 minutes long.

Astronauts go on spacewalks for many reasons. Spacewalks let astronauts work outside their spacecraft while still in space. Astronauts can do science experiments on a spacewalk. This helps scientists learn how being in space affects different things. Spacewalks also let astronauts test new equipment. <u>They</u> can repair satellites or spacecraft that are in space instead of bringing them back to earth to fix.

When astronauts go on spacewalks, they wear spacesuits to keep themselves safe. These suits are pressurized. This means that the suits are filled with oxygen which astronauts need to breathe. Astronauts also have the water they need to drink. Once in their suits, astronauts breathe pure oxygen for a few hours. Breathing only oxygen helps get rid of all the nitrogen in an astronaut's body. If they didn't get rid of the nitrogen, the astronauts might get gas bubbles in their body when they walked in space. These gas bubbles can cause astronauts to feel pain in their shoulders, elbows, wrists and knees.

When on a spacewalk, astronauts use safety tethers to stay close to their spacecraft. Tethers are like ropes. One end is **hooked** to the spacewalker. The other end is connected to the vehicle. The safety tethers keep astronauts from floating away into space.
